On The Cover

Type 1 (pink) and Type 2 (blue) hairpin telomeres constitute two of the major telomere sequence groups in the Lyme disease pathogen *Borrelia burgdorferi*. Type 1 and Type 2 telomeres are differentially resolved by the telomere resolvases from Lyme disease and relapsing fever *Borrelia* species. Shown here are models of intrinsic bending of several Type 1 (pink) and Type 2 (blue) telomeres predicted by the bend.it server. For details see the article by Moriarty and Chaconas, pages 23293–23301.
